SUMMARY:

- Results-driven Software Engineer with strong experience building scalable full-stack applications, production-grade backend services, and high-quality UI components across enterprise and customer-facing platforms.
- Expert in Golang, React, JavaScript, and REST APIs with strong system design and microservice architecture skills—building high-performance, maintainable modules that power real-time workflows and integrate seamlessly across distributed systems.
- Hands-on experience in **DevOps workflows**, managing deployments, branching strategies, environment setup, and version control while collaborating closely with cross-functional teams.
- Designed HLD/LLD, built Figma wireframes, and led client discussions to translate requirements into precise technical deliverables, while applying clean code principles, design patterns, and reusable components to drive end-to-end feature development, API integrations, and performance optimization across backend and frontend stacks.

SKILLS:

Programming Languages	:	Golang, SQL, C++, JavaScript, Shell Script, python
Web & Frontend	:	HTML, CSS, React, Redux, jQuery, JSON
Backend & APIs	:	Node.js, REST APIs, Postman, Apache Kafka, JWT Auth
Databases	:	PostgreSQL, MySQL, SQL Server, Oracle
DevOps & Tools	:	Git, GitHub, Docker, Jira, GitLab, RabbitMQ, Linux/Unix
Concepts	:	Microservices, Concurrency, SOLID Principle, TDD/Agile, ETL, Data Sharding, Connection Pooling

EDUCATION:

Post Graduate Diploma in Advanced Computing (PG-DAC) — **Sept 2023 – Jan 2024**
Centre for Development of Advanced Computing (CDAC) — Grade A

Bachelor of Engineering in Computer Science — **Jan 2021 – Jul 2023**
Savitribai Phule Pune University, Pune, India — 8.6/10.0
Coursework: *Distributed Systems, Operating System, Computer Networking, Database Management Systems, Data Mining, Algorithms, Microprocessors.*

EXPERIENCE:

Associate Software Engineer | 3i-Infotech | Navi Mumbai, India — **May 2024 – Till Date**

- Led a team of 6 and served as the primary point of contact for the complete development of the stock market trading & independent platform, ensuring technical alignment and smooth communication with clients and internal teams.
- Designed and delivered IRRA, owning end-to-end Golang backend development—including fail-safe logic, automation workflows, and performance optimizations—to automatically close open positions during outages and ensure continuous, reliable trading.
- Implemented TCP socket ingestion, RabbitMQ pipelines, and concurrent worker-pool processing to ensure low-latency, scalable trade handling.
- Collaborated with QA, DevOps, and business teams to validate failover behavior and high-load performance, while leading UAT cycles, production readiness, and ongoing improvements to system architecture, trading logic, and automation components.
- Managed sprint planning, task delegation, architectural decisions, and code reviews to maintain engineering quality and project velocity.
- Enhanced platform resilience by implementing health checks, monitoring dashboards, and alerting workflows to detect system degradation and trigger automated fail-safe actions.
- Optimized PostgreSQL queries, indexing and connection pooling to handle large trading volumes with consistent low-latency performance.
- Executed ETL-driven data migration from Oracle to PostgreSQL and reverse migration back to Oracle with validated data accuracy.

PROJECTS:

IRRA (Investor Risk Reduction Application)

- Led development of high-throughput, fault-tolerant microservices powering exchange-facing financial systems, handling **mission-critical order pipelines where downtime risked multi-billion INR exposure and market disruption**.
- Standardized lifecycle management for **40+ distributed services** and authored **HLDs/LLDs**, improving deployment reliability, operational control, and cross-team alignment for high-risk systems.
- Applied **hexagonal architecture (ports & adapters)** to decouple business logic from infrastructure, significantly improving **testability, scalability, and long-term maintainability**.
- Conducted **failure-mode analysis and testing across UAT and production scenarios**, ensuring deterministic behavior during **network failures, partial data states, and exchange-side disruptions**.
- Acted as a **technical liaison between engineering, operations, and exchange stakeholders**, resolving production issues with data-backed analysis and ensuring **platform stability during critical trading windows**.
- Contributed to building a **fault-tolerant, distributed system that safeguards investor trust**, ensuring uninterrupted trading and protecting against systemic financial discrepancies.

ACHIEVEMENTS:

- Presented at *5th International Conference on IoT, Next Generation Networks & Cloud Computing* — link Paper
- Presented at State-level paper presentation, *Government Polytechnic, Karad* — link
- Google IT Support Professional Certificate — link
- Microsoft Certified: Azure AI Fundamentals — link
